

IPA strengthens position as European Market Leader

IPA will finalize this month the installation of a turnkey assembly line to a world-class Hungarian Assembly Factory. The system covers the total assembly process from start-of-assembly up to the packing process of the ready product.

A very short project realisation time was essential. Flexibility is guaranteed to widen the product range assembled on the system for future (new) products.

IPA offers conveyor solutions for your objectives in productivity and ROI.

IPA can integrate the optimum conveyor system for your specific situation. Optimum in terms of **Return On Investment** and **Quality**.

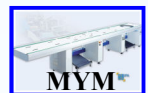

A moderately higher investment may be paid back with a relevantly higher output efficiency and much shorter return on investment.

Our systems consist of the Original **VTS 100** accumulating chain conveyor, it's double speed upgrade **VTS100 DS** and the state of the art **MYM 120** segmented belt conveyor.

MYM 120 has a very high transport speed and excellent set-up time. The stop position has practically zero impact-force on your product: the system works stopperless, and has a very smooth, adjustable deceleration and acceleration. The ultimate solution to combine productivity with smooth protection of your product.

No stoppers required with MYM

	VTS 100	VTS100 DS	MYM
investment level	low	basic	average
speed	15 m/min	25 m/min	50 m/min
set-up transport time	<5 sec	<4 sec	<2 sec
stop accuracy	+/- 1 mm	+/- 1 mm	+/- 1 mm (stopperless)
type	chain conveyor	double speed chain conveyor	modular belt conveyor
